

Diamond saw blades for smaller projects

Diamond Products, specialist in the manufacture, assembly and sale of diamond tools and equipment for industrial applications, recently launched a new range of diamond saw blades suited for use on smaller-scale projects.

The new Enduro Purple range of diamond saw blades is designed with cost in mind, though Diamond Products director Brian Clark emphasises that the quality of the blades has not been compromised. "All our products are fully backed and guaranteed. The Enduro Purple blades will last longer and ensure a smoother cut than any other product in its price range," he says.

Clark points out that the manufacturing specifications for the Enduro Purple blades are the same as for all Diamond Products' premium blades. "The steel cores and dimensional tolerances of the blades are exactly the same. Enduro Purple is a highly durable and reliable blade, which differs slightly from our other range only in that it has an appropriate-grade diamond and a different bond which holds the diamonds in place. This decreases

The Enduro Purple range of diamond saw blades from Diamond Products is made for tough cutting on smaller building projects.

the lifespan of the blade, but it makes the product more affordable and ideally suited to smaller applications."

The Enduro Purple range of blades are made for use on either a 115mm or 230mm angle grinder, in applications that include plumbing, paving, electrical work and general construction. The range includes segmented blades for masonry and concrete cutting, turbo blades for natural stone and tile cutting, and continuous blades for ceramic tile cutting.

Diamond Products co-director, Darryl Gray, notes that the cost of diamond blades has come down over the

years as production has increased. The Enduro Purple range is now available at selected hardware stores around South Africa and can be purchased directly by customers working on smaller scale projects.

Clark says it's important to match the product to the job. "By providing dedicated support and training to our distributors and customers, Diamond Products will ensure that the correct blade is being used safely for the correct application. What's more, the packaging of each Enduro Purple blade is marked with the application for which it is designed."
